The proprietary **HARRIS SOLARIS™ Battery Management System (BMS)** exercises overall control of the battery pack to ensure it is operating within the defined parameters:

- + **Temperature** – Cell and Overall stack temperature monitoring
- + **Voltage** – Cell and overall stack voltage monitoring
- + **Current** – Current measurement and monitoring
- + **Open wire protection**
- + **SOC** – The State of Charge has an important role in determining the remaining capacity of the battery pack
- + **SOH** – State of Health is an important indicator of the battery's health
- + **Manual fault reset functionality**
- + **Fail-safe technology** – Including multiple contactors that are controlled by the BMS
- + **Pre-charge futures** – Mitigates high current demand when the battery is turned on. Eliminates high current draw and potential sparks, enabling smooth boot-up on inverter/electronics.
